Professional Experience –

Stanford University | *Cloud Operations Engineer* | [Cloud Enablement Group](#)

02/2025 - Present

- Drove Stanford's campus-wide Cloud FinOps initiative: optimizing cloud spend via VM/storage rightsizing, strategic RI/SP purchases, anomaly detection for critical business units, & automated budget thresholds at account creation.
- Managed \$10M+ annual cloud spend across three clouds through a transparent and accurate Chargeback and Showback model.
- Launched cloud cost visibility initiatives, including AWS Cloud Intelligence Dashboard (CID) and CUDOS, integrating with Athena for CUR analysis to uncover underutilized resources and drive down waste reduction.
- Orchestrated enterprise multi-cloud environment, administering lifecycle operations and governance for hundreds of AWS, Azure, and GCP accounts.
- Automated thousands of AWS SSO account assignments using Lambda and EventBridge to secure provisioning.
- Programmed a Slackbot to automate \$3M in research cloud credits in GCP and to increase visibility for leadership.
- Deployed the first compliant AWS GovCloud environment at Stanford University IT to support a DARPA-funded project.

Stanford University | *Cloud Operations Analyst* | [Technology Consulting Group](#)

11/2019 - 02/2025

- Optimized AWS costs through RIs, SPs, CUDs, right-sizing, VM family updates, and disks, leading commitment-based strategies that delivered \$250K in annual savings.
- Consulted, architected, deployed, and maintained custom cloud solutions for various university groups using AWS.
- Engineered an immutable deployment solution using Elastic Beanstalk, integrating CI/CD practices and decoupling.
- Created client-facing dashboards for utilization and cloud spend; analyzed the benefits of amortizing RI purchases.
- Created cost estimates and set budget alarms for cloud deployments, preventing overruns.
- Evaluated client data to select vendors and storage classes; applied lifecycle rules for cloud-native solutions, resulting in efficient data management and cost-effective solutions.
- Created and configured hundreds of hardened AWS accounts using SCPs via AWS Organizations.
- Streamlined multi-account access via switch roles, resulting in enhanced security and efficiency in Cloud Ops.
- Remediated security-related incidents for multi-cloud accounts via GuardDuty and Wiz findings.
- Performed package upgrades and monthly security updates using automation for Linux and Windows VMs.
- Configured and resolved technical SAML issues for various SaaS integrations with the Stanford SP database.
- Managed university-wide endpoint backup service with over 20,000 users and trained support personnel.

UCSF Mission Center Building | *Enterprise IT Cloud Analyst Intern*

01/2019 - 09/2019

- Handled AWS billing, updated Drupal websites, & purchased Reserved Instances for the central IT group.

Technical Skills –

- Cloud FinOps: SQL, Bash, Python, Tableau, Terraform, CI/CD, Cursor, AWS, Azure, GCP
- SaaS: 1Password, Airtable, BigFix, Burwood, Confluence, CrashPlan, Dashlane, GitLab, GitHub, HubSpot, Jira, OpsGenie, Qualys, ServiceNow, Slab, Slack, Splunk, StruxureWare, Vault, Wasabi, Wiz, Site24x7

Cloud Certifications –

- FinOps Certified Practitioner, FinOps Certified Engineer, FinOps Certified FOCUS Analyst (2024)
- AWS Certified Solutions Architect (SAA-C01, 2019), AWS Certified Cloud Practitioner (CLF, 2018)
- Microsoft Azure Fundamentals (2024), Google Cloud Digital Leader (2024)

Education –

- B.S. Computer Science, University of California, Santa Cruz
